

LEVEL 1: 1–2 SECOND INSTANT SPEED KILLS

ZERO-PEN • PURE OPTICAL RECOGNITION • INSTANT PROPERTY LOCKS

Contains 20 Master Exam Questions across Reasoning, Maths, English & GK with Examiner Trap Justifications and Sub-2-Second Execution Keys

LEVEL 1 SPEED PHILOSOPHY & JUSTIFICATION

Why 1–2 Seconds is 100% Possible: Level-1 questions do NOT require numerical computation or syntax translation. They exploit **invariable mathematical properties** (e.g. π is a multiple of 11, positive statements cannot generate negative conclusions, grammatical voice never changes tense). By directly matching the property against the options, you eliminate the cognitive load of solving from scratch.

Q1. [Reasoning: 2-Dice Cancellation]

Speed Target: 1s

Question: Two views of a standard dice are shown. View 1: (2, 5, 3). View 2: (2, 5, 6). What number is opposite 3?

Options: A) 1 B) 6 C) 4 D) 2

Examiner's Trap: Forces candidates to draw 3D dice rotations or write clockwise sequences.

Smartest Trick Justification: "Kill the twins, the lonely wins. When two faces match on two views, remaining faces are guaranteed opposite."

Step-by-Step Speed Kill: Cancel 2 and 5 on both views → 3 is directly opposite 6. → Answer: B (6)

Q2. [Maths: Mensuration Pi Filter]

Speed Target: 1-2s

Question: Find the Total Surface Area of a solid cylinder with radius 7 cm and height 10 cm. [Formula: $2\pi r(r+h)$]

Options: A) 736 cm² B) 748 cm² C) 752 cm² D) 745 cm²

Examiner's Trap: Tricks students into calculating $2 \times 22/7 \times 7 \times 17$ by hand (wastes 45 seconds).

Smartest Trick Justification: "When Pi is inside, Eleven will decide. $\pi = 22/7 = 2 \times 11$. The answer MUST be divisible by 11."

Step-by-Step Speed Kill: Test 11-divisibility (Odd Sum - Even Sum): For 748, (7+8) - 4 = 11 (Divisible!). A, C, D give 5, 4, 8 (Fail). → Answer: B (748 cm²)

Q3. [English: Active/Passive Verb Scan]

Speed Target: 1s

Question: Select the correct passive form: 'The mechanic repaired the car yesterday.'

Options: A) The car is repaired by the mechanic.
B) The car was repaired by the mechanic yesterday.
C) The car had been repaired by the mechanic.
D) The car has been repaired by the mechanic.

Examiner's Trap: Adds long time-adverbials ('yesterday') and shifts tenses in options to cause reading fatigue.

Smartest Trick Justification: "Voice changes the costume, NEVER the tense. Past simple (V2: repaired) → was/were + V3."

Step-by-Step Speed Kill: Scan verbs only: Option B has 'was repaired'. Options A, C, D use is/had been/has been (all wrong tenses). → Answer: B

Q4. [GK: Science Prefix Match]

Speed Target: 1s

Question: Nephritis is a medical condition characterized by inflammation of which human organ?

Options: A) Liver B) Heart C) Kidney D) Lungs

Examiner's Trap: Uses Latin medical pathology names to induce panic.

Smartest Trick Justification: "Prefix tells the organ: Nephro = Kidney; Hepato = Liver; Cardio = Heart; Pulmo = Lungs."

Step-by-Step Speed Kill: Scan prefix: 'Nephro-' immediately points to Kidney. → Answer: C (Kidney)

Q5. [Reasoning: Flat Open Cube]

Speed Target: 1-2s

Question: An unfolded cube shows a straight strip with faces 1 - 4 - 6. Which pair can NEVER appear adjacent on the folded cube?

Options: A) 1 and 4 B) 4 and 6 C) 1 and 6 D) None of these

Examiner's Trap: Presents multiple folded 3D cube diagrams to confuse spatial rotation.

Smartest Trick Justification: "Jump one block in a line, opposite pairs you will find. Opposite faces can never be adjacent or visible together."

Step-by-Step Speed Kill: 1 and 6 are alternate in a line → they are opposites → they can NEVER be adjacent. → Answer: C (1 and 6)

Q6. [English: Direct/Indirect Backshift]

Speed Target: 1s

Question: Convert to indirect speech: She said, 'I am writing a letter.'

- Options: A) She said that she is writing a letter.
B) She said that she was writing a letter.
C) She said that she had written a letter.
D) She said that she has been writing a letter.

Examiner's Trap: Distracts with pronoun changes while subtly keeping present continuous tense in Option A.

Smartest Trick Justification: "Past reporting verb kicks tense one step back: 'am writing' → 'was writing'."

Step-by-Step Speed Kill: Scan verb only: Option B is the only option containing 'was writing'. → Answer: B

Q7. [Maths: Algebra Degrees of Freedom]

Speed Target: 1-2s

Question: If $a + b + c = 0$, find the value of $(a^2 / bc) + (b^2 / ca) + (c^2 / ab)$.

- Options: A) 0 B) 1 C) 3 D) -1

Examiner's Trap: Forces students to find LCM (abc) and prove the algebraic identity $a^3+b^3+c^3 = 3abc$.

Smartest Trick Justification: "More unknowns than equations? Put $a=1, b=1, c=-2$ (Sum=0). Expression value is invariant."

Step-by-Step Speed Kill: Plug in: $(1/-2) + (1/-2) + (4/1) = -0.5 - 0.5 + 4 = 3$. → Answer: C (3)

Q8. [Reasoning: Syllogism Polarity Filter]

Speed Target: 1s

Question: Statements: 'All roses are flowers. All flowers are beautiful.'

Conclusion: 'No rose is beautiful.'

- Options: A) Follows B) Does not follow

Examiner's Trap: Forces drawing Venn diagrams for 30 seconds.

Smartest Trick Justification: "Positive + Positive = 100% Positive. Positives can NEVER generate a negative conclusion."

Step-by-Step Speed Kill: Both statements are positive; conclusion is negative ('No...') → Instantly False. → Answer: B (Does not follow)

Q9. [GK: Delhi Sultanate Chronology]

Speed Target: 1s

Question: Which dynasty ruled Delhi immediately after the Khilji Dynasty?

- Options: A) Slave B) Tughlaq C) Sayyid D) Lodi

Examiner's Trap: Mixes medieval dates and dynasty names to confuse order.

Smartest Trick Justification: "SKTSL Ladder: Slave → Khilji → Tughlaq → Sayyid → Lodi."

Step-by-Step Speed Kill: After K (Khilji) comes T (Tughlaq). Done in 1 second. → Answer: B (Tughlaq)

Q10. [Maths: Trigonometry Right-Angle Pin]

Speed Target: 1-2s

Question: Simplify: $(\sin\theta / 1+\cos\theta) + (1+\cos\theta / \sin\theta)$

- Options: A) $2 \sin\theta$ B) $2 \cos\theta$ C) $2 \csc\theta$ D) $2 \sec\theta$

Examiner's Trap: Leads students into cross-multiplication, squaring $(1+\cos\theta)^2$, and using $\sin^2\theta+\cos^2\theta=1$.

Smartest Trick Justification: "Sin-Cos loves 90. Put $\theta = 90^\circ$ ($\sin 90=1, \cos 90=0$)."

Step-by-Step Speed Kill: Expression = $(1/1+0) + (1+0/1) = 1 + 1 = 2$. Check options at 90° : $2 \csc(90^\circ) = 2(1) = 2$. Option C matches. → Answer: C ($2 \csc\theta$)

Q11. [English: Conjunction Twin Lock]

Speed Target: 1s

Question: Spot the error: 'No sooner had the teacher entered the classroom when all students stood up.'

- Options: A) had the teacher B) entered the classroom C) when all students D) stood up

Examiner's Trap: Uses correct inversion 'had the teacher entered' to distract from conjunction error.

Smartest Trick Justification: "Hardly pairs with When; No Sooner takes THAN."

Step-by-Step Speed Kill: 'No sooner' is paired with 'when' → Error is in part C (must be 'than'). → Answer: C

Q12. [Reasoning: Mirror Image Edge Scan]

Speed Target: 1s

Question: Find the mirror image of 'PROSPECT' placed in front of a vertical mirror (right side).

Options: A) P■O■P■CT B) T■P■O■P C) T■9■O■P D) ■■■PSORP

Examiner's Trap: Inverts middle letters subtly to force full word verification.

Smartest Trick Justification: "Mirror reflection reverses lateral order: Word starting with P must end with inverted P, and start with inverted T."

Step-by-Step Speed Kill: Scan first and last letters: Must start with T and end with inverted P. Pick Option B in 1s. → Answer: B

Q13. [GK: Classical Dance Keyword]

Speed Target: 1s

Question: Guru Kelucharan Mohapatra was an iconic maestro of which Indian classical dance form?

Options: A) Kathak B) Bharatanatyam C) Odissi D) Kathakali

Examiner's Trap: Tests specific historical gurus and exponents across all 8 classical dances.

Smartest Trick Justification: "Mohapatra / Sapat / Pani = Odissi (Odisha)."

Step-by-Step Speed Kill: Scan surname 'Mohapatra' → instantly Odissi. → Answer: C (Odissi)

Q14. [Maths: Unit Digit Truncation]

Speed Target: 1s

Question: Evaluate: $948 \times 317 - 523 = ?$

Options: A) 300,001 B) 300,003 C) 300,005 D) 300,009

Examiner's Trap: Forces 3-digit by 3-digit multiplication by hand.

Smartest Trick Justification: "Last Digit Filter: If options have distinct ending digits, compute only unit digits."

Step-by-Step Speed Kill: Unit digits: $(8 \times 7) - 3 = 56 - 3 = \text{ends in } 3$. Only Option B ends in 3. → Answer: B (300,003)

Q15. [English: Preposition Fluff Cloak]

Speed Target: 1-2s

Question: Spot the error: 'The aroma of roasted coffee beans were spreading across the cafe.'

Options: A) The aroma B) of roasted coffee beans C) were spreading D) across the cafe

Examiner's Trap: Places plural noun 'beans' right before verb 'were' to trick acoustic memory.

Smartest Trick Justification: "Blindfold words inside prepositions. Connect root subject directly to verb."

Step-by-Step Speed Kill: Cross out [of roasted coffee beans]. Read: 'The aroma were' → Singular aroma requires 'was'. Error is C. → Answer: C

Q16. [Reasoning: Alphabet Sum-27 Opposites]

Speed Target: 1s

Question: In a certain code, A is coded as Z, B as Y, C as X. What is the code for G?

Options: A) S B) T C) U D) R

Examiner's Trap: Candidates write the entire A-Z table on rough sheets.

Smartest Trick Justification: "Opposite pairs sum to 27 (GT Road → G is opposite T)."

Step-by-Step Speed Kill: $G = 7 \rightarrow 27 - 7 = 20$ (T). Done in 1s. → Answer: B (T)

Q17. [GK: Polity Article +89 Rule]

Speed Target: 1-2s

Question: Article 76 of the Constitution deals with the Attorney General of India. Which Article deals with the Advocate General of a State?

Options: A) Article 164 B) Article 165 C) Article 166 D) Article 167

Examiner's Trap: Tests memory of individual state constitutional articles.

Smartest Trick Justification: "Center Article + 89 = State Equivalent."

Step-by-Step Speed Kill: $76 + 89 = 165 \rightarrow$ Article 165. Zero memorization needed. → Answer: B (Article 165)

Q18. [Maths: Percentage Consumption Ladder]

Speed Target: 1s

Question: If the price of sugar drops by 20%, by what percent can consumption increase for constant expenditure?

Options: A) 20% B) 25% C) 16.66% D) 30%

Examiner's Trap: Leads to setting up equations with 100, 80, and calculating $(20/80) \times 100$.

Smartest Trick Justification: "If decrease is $-a/b$, increase is $+a/(b-a)$."

Step-by-Step Speed Kill: $-20\% = -1/5 \rightarrow \text{Increase} = +1/(5-1) = +1/4 = 25\%$. Solved in 1s. → Answer: B (25%)

Q19. [English: Voice Helping Verb Scan]

Speed Target: 1s

Question: Select the correct passive form: 'They have completed the building project.'

- Options:** A) The building project was completed.
B) The building project has been completed.
C) The building project had been completed.
D) The building project is completed.

Examiner's Trap: Replaces perfect tense with simple past or past perfect in distractors.

Smartest Trick Justification: "Present perfect (has/have + V3) in passive is ALWAYS has/have been + V3."

Step-by-Step Speed Kill: Scan for 'has been completed' → Option B in 1s. → Answer: B

Q20. [Reasoning: Dice 1-Common Face Opposite]

Speed Target: 2s

Question: Two views of a dice show (4, 1, 2) and (4, 5, 6). What is opposite to 1?

- Options:** A) 5 B) 6 C) 2 D) 3

Examiner's Trap: Candidates rotate 3D figures mentally.

Smartest Trick Justification: "Lock common face (4), spin clockwise: (4-1-2) and (4-5-6). 1 aligns with 5."

Step-by-Step Speed Kill: Clockwise pairs: 1 is opposite 5, 2 is opposite 6. Answer: 5. → Answer: A (5)
